SUMMARY

Computer Engineering graduate of Ajayi Crowther University working as a full-stack developer. I build web apps with Next.js, TypeScript, Node.js, Python and PostgreSQL, and I handle everything from database design to deployment. My biggest project is Realty, a real estate platform with buyer, agent and admin roles, agent approval, lead management and live chat. I've also built a gym tracker with React, TypeScript and Supabase, and Tan's Kitchen, a food ordering site for a client. My degree is in engineering, so I'm comfortable lower down the stack too: I write ESP32 and Arduino firmware, and I did networking work during my industrial training and two internships.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frontend: React, Next.js (App Router), Tailwind CSS, Vite, responsive and mobile-first UI

Backend: Node.js, FastAPI, RESTful APIs, server actions, Prisma ORM, JWT authentication, OAuth (Google sign-in), zod validation

Databases: PostgreSQL, Supabase (Auth, Storage, connection pooling), SQLite, schema design and migrations

DevOps and Tooling: Git, GitHub, Vercel (CI/CD deployment), environment configuration and credential management

Integrations: Brevo transactional email API, Google Cloud OAuth, Google Places API basics

Embedded Systems and IoT: ESP32-WROOM-32, Arduino Uno, sensor integration (DHT11, capacitive soil moisture, MH-RD rain sensor, float switch), OLED displays, relay, buzzer and LED circuits

Networking and Hardware: Router configuration, cable running and crimping, troubleshooting, Cisco Packet Tracer, laptop hardware repairs

Other Tools: Proteus, circuit prototyping (breadboard, perfboard, soldering), AI tools (ChatGPT, Claude) for research and coding support

EXPERIENCE

Software Developer, Independent Projects

Realty, full-stack real estate platform (Next.js, TypeScript, Tailwind CSS, Prisma, PostgreSQL on Supabase)

- Designed the database schema and migrations, built the app, and deployed it to Vercel from GitHub.
- Built authentication with buyer, agent and admin roles, Google sign-in, password reset and account deletion (the deleted user's data is reassigned automatically). New agents apply and need approval before they can list properties.
- Built property management with server actions, zod validation and audit logging, plus an image pipeline that resizes and re-encodes uploads with Sharp and stores them in Supabase Storage.
- Added property search and filtering, agent profile pages, saved favourites, a lead management dashboard with role-scoped visibility, and real-time buyer-to-agent chat.
- Added IP-hash rate limiting on the enquiry form, and per-listing SEO metadata, a generated sitemap and schema.org JSON-LD.
- Set up enquiry and account notification emails through the Brevo API.
- Added WhatsApp click-to-chat and call buttons with pre-filled messages on listing and agent pages, a mobile-responsive navigation, and an admin dashboard with property and lead counts.

Tan's Kitchen, food ordering website for a client (React, Tailwind CSS, TypeScript, Supabase)

- Built a Nigerian-food ordering site with a menu, a daily special, a cart, order history and user login.
- Built a separate admin site for the restaurant owner.

Gym Tracker web application (React with Vite, Tailwind CSS, TypeScript, Supabase), deployed on Vercel

- Built a React frontend styled with Tailwind CSS, and rebuilt the backend, database and authentication on TypeScript and Supabase (the first version used FastAPI and SQLite).
- Implemented authentication, workout logging, weight progress charts and an exercise library, and deployed it to Vercel.

Portfolio website (React, Vite): portfolio-seyitan.vercel.app

- Built and deployed a responsive portfolio site with a project gallery, scroll animations, a full screen image viewer, and tap-to-call, WhatsApp and email buttons.

Web design projects

- Built and deployed a full-stack fitness tracker (React, TypeScript, Supabase) with email-verified authentication, password reset, and per-user data isolation using Row Level Security.
- Designed a PostgreSQL schema and typed data layer for workouts, body metrics and progress photos, and migrated the app from a FastAPI/SQLite backend to Supabase.
- Implemented a drift-proof workout timer, interactive progress charts and an installable PWA, deployed on Vercel.

Tech stack for this project
React, TypeScript, Vite, Tailwind CSS, React Router, Recharts, Supabase (PostgreSQL, Auth, Storage), Vercel.

Database-level security, Reliable timers

(LInks to all projects in my portfolio)

Networking Intern, 6-month industrial training (Networking Unit)

- Worked on both hardware and software: configured routers, ran and crimped network cable, and troubleshot connection problems.
- Used Cisco Packet Tracer to design and simulate network layouts.

Networking Intern, two 3-month internships (Networking and Computer Hardware Unit)

- Kept working on router configuration and structured cabling.
- Ran more network simulations and tests in Packet Tracer.

ENGINEERING PROJECTS

IoT-Enabled Smart Irrigation System (final year project)

- Built an automated irrigation system on an ESP32-WROOM-32 with soil moisture, rain and float sensors, an OLED display, and a live HTML dashboard with JSON endpoints.
- Did the circuit design, firmware and flowcharts myself, then turned the thesis into a publication-ready journal article.

Fire Detection System

- Built a fire detection system on an Arduino Uno that sends alerts when its sensors trigger.

EDUCATION

Ajayi Crowther University, Oyo, Nigeria

B.Eng. Computer Engineering, graduated. CGPA: 3.40/5.00

LANGUAGES

English: fluent | Yoruba: fluent

ADDITIONAL INFORMATION

Open to software engineering roles (backend, frontend and full-stack), including internship and entry-level positions.
